

Balance the ruler

What you need:

All you need is a 30cm ruler

What to do:

Ask for two volunteers.

One person holds out both index fingers about 30 cm apart.

The other person carefully rests the ruler across the first person's fingers so that it is horizontal.

Then tell the person holding the ruler to move their fingers slowly towards each other, so that they meet.

Can you make your fingers meet anywhere other than the middle of the ruler? (without making the ruler fall)

Write what happened
